Executive Summary

Simple Ease of Use Platforms to Onboard New Users To Defi Capturing The Mass Market at Entry built on the Binance Smart Chain (BSC)

The Ascension

Ease of Use platforms with onboarding and education that enable experts and new users to Defi with fast, simple onboarding and ease of use to enter, trade, learn, grow, and ascend to next level generational wealth

Industry Gaps and Opportunities

Ease of Use

Technology to track, trade, and grow from low cap entry for the masses lacks smooth and transparent processes to portfolio growth. Low cap entry points starting with Portfolio Apps and Trade Journals that lead to wallet integration and finally to a swap/exchange are non-existent in the current market.

Platform Gaps

There are currently no options for sophisticated portfolio monitoring and trade tracking of newly added, low cap alt coins to ensure and monitor profitability by the minute with appropriate alerts, options, and ease of use.

Integration Sophistication

Currently there is not a solution that bridges the gap from low cap purchase and portfolio tracking and trade journaling with wallet and exchange integration all-in-one.

Ascension Architecture

The market lacks easy-to-understand UI/UX and onboarding and ascension from entry points to sophisticated master traders. New users are coming to Defi and there currently is an all-in-one platform integrated from a basic portfolio starting with low caps, to an easy-to-use and exchange wallet, to an actual exchange with technical analysis available.

The Ascention Solution

Advanced Portfolio Tracking and Management

Creating a portfolio tracking that integrates seamlessly with wallets that allows a simple straight forward P/L and trade journaling in real time solves a current real world problem for novices and experts alike

Wallet Exchange Integration

Creating an easy to use API and clipboard function to allow seamless ascension of transactions and tracking from wallet, to exchange, to portfolio for tracking wealth and growth

Integrated Ascension

Easy to understand, explain, and use cross platform/app transactions that anyone can navigate and learn in minutes

Ease of Ascension

Starting users with a new system for tracking low cap altcoins in a sophisticated portfolio with 1-click integration solutions increases transactions, investors, and growth for all entry points of new users to the Ascension model of Defi

The Steps to Ascend

Learning Portal

Direct and on-point short clips to develop big picture ideas in small bursts for app use, process, and monetization

Portfolio - Simple

Sophisticated Set Up, Tracking, Management, and Cross Platform Integration

Trade Journal

Easy trading journal using AI to track, monitor, and adjust trading strategy based on AI parameters for indicators in the market specifically for your trades

Wallet

Seamless Integration from Portfolio and Trade Journal to Wallet To Exchange
Streamlining Integration and Smoothing Issues Across Products

All-In-One Exchange

Immediate and logical progression from Wallet to Swap and Immediate Sync to Wallet, Portfolio, and Trade Journal

19 Contact

Initial Time To AscendX

It will take roughly 1-2 months to be fully registered

Month 1-2 the following will occur:

Coin Registration

Website and Branding

Social Media Set Up

Portfolio Tracking App

Strategy and Roadmap will be complete at **90%** (**10%** left open for other staff ideas once hired)

The office will be allocated

The team will be hired

Legal set up and structure complete

Continued Time Horizon

Month 4-6

- Full Marketing Campaign Launch
- Pre-Sale - At this stage the company will be fully funded and self sufficient.

Months 6-10

- Outline the partnerships and goals depending on the individual strategies with an aim to do very hard marketing in month 9 with a IEO in month 10 or 11. We should target a release of 2.5B tokens in our IEO at the rate of .30 cents. The 500m tokens will be allocated to the Dev team and will be distributed according (tokens will be locked for 6 months to a year)
